

GSL coupled system

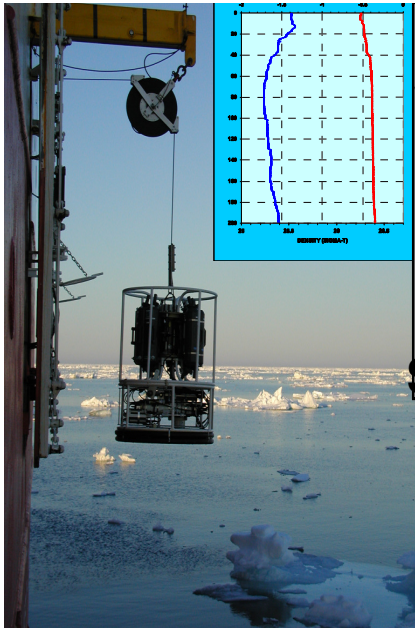

Saucier *et al.* (2004)

**Present and longer term development
of ocean forecasting and it's
applications in DFO.
Where GOAPP research fit's in.**

DFO In-situ OBSERVATION PROGRAMS

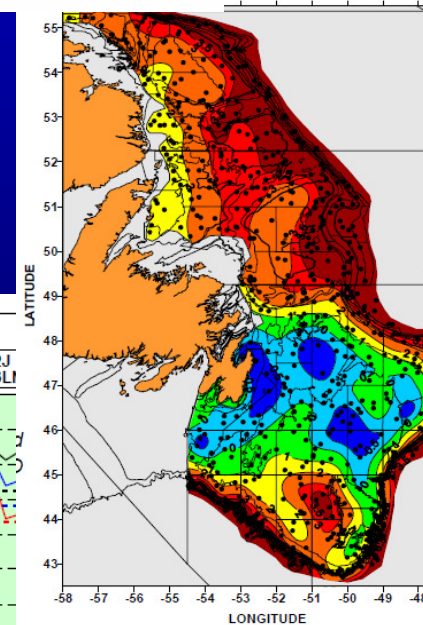

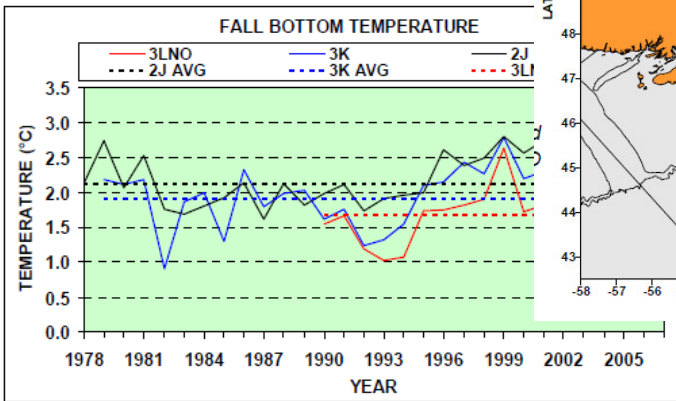

DFO In-situ OBSERVATION PROGRAMS

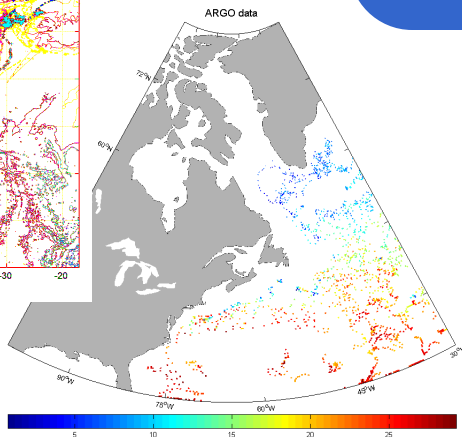

2007 - Bottom Temperature

Multi Species survey

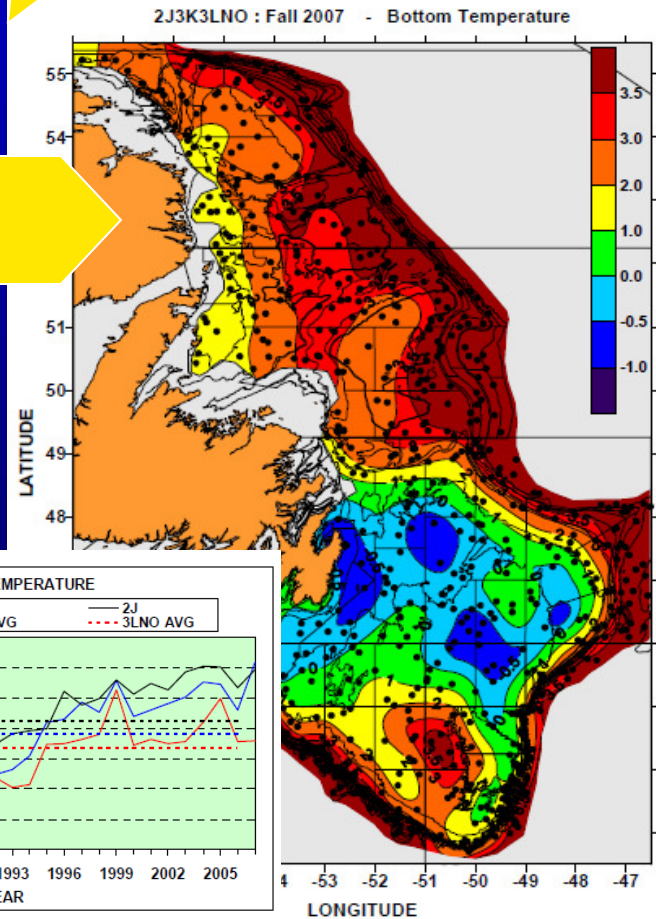

Enhancing DFO In-situ OBSERVATION PROGRAMS

Assimilation
Ocean Modelling

Ocean:

- Historical Reconstruction
- Forecasting

C-NOOFS Regional System

Part of a Unified Canadian approach

- Defense
- Environment Canada
- Fisheries and Oceans Canada

In which MERCATOR-OCEAN is a strategic partner.

Objective

Pre-operational ocean ice forecast system for Atlantic Canada

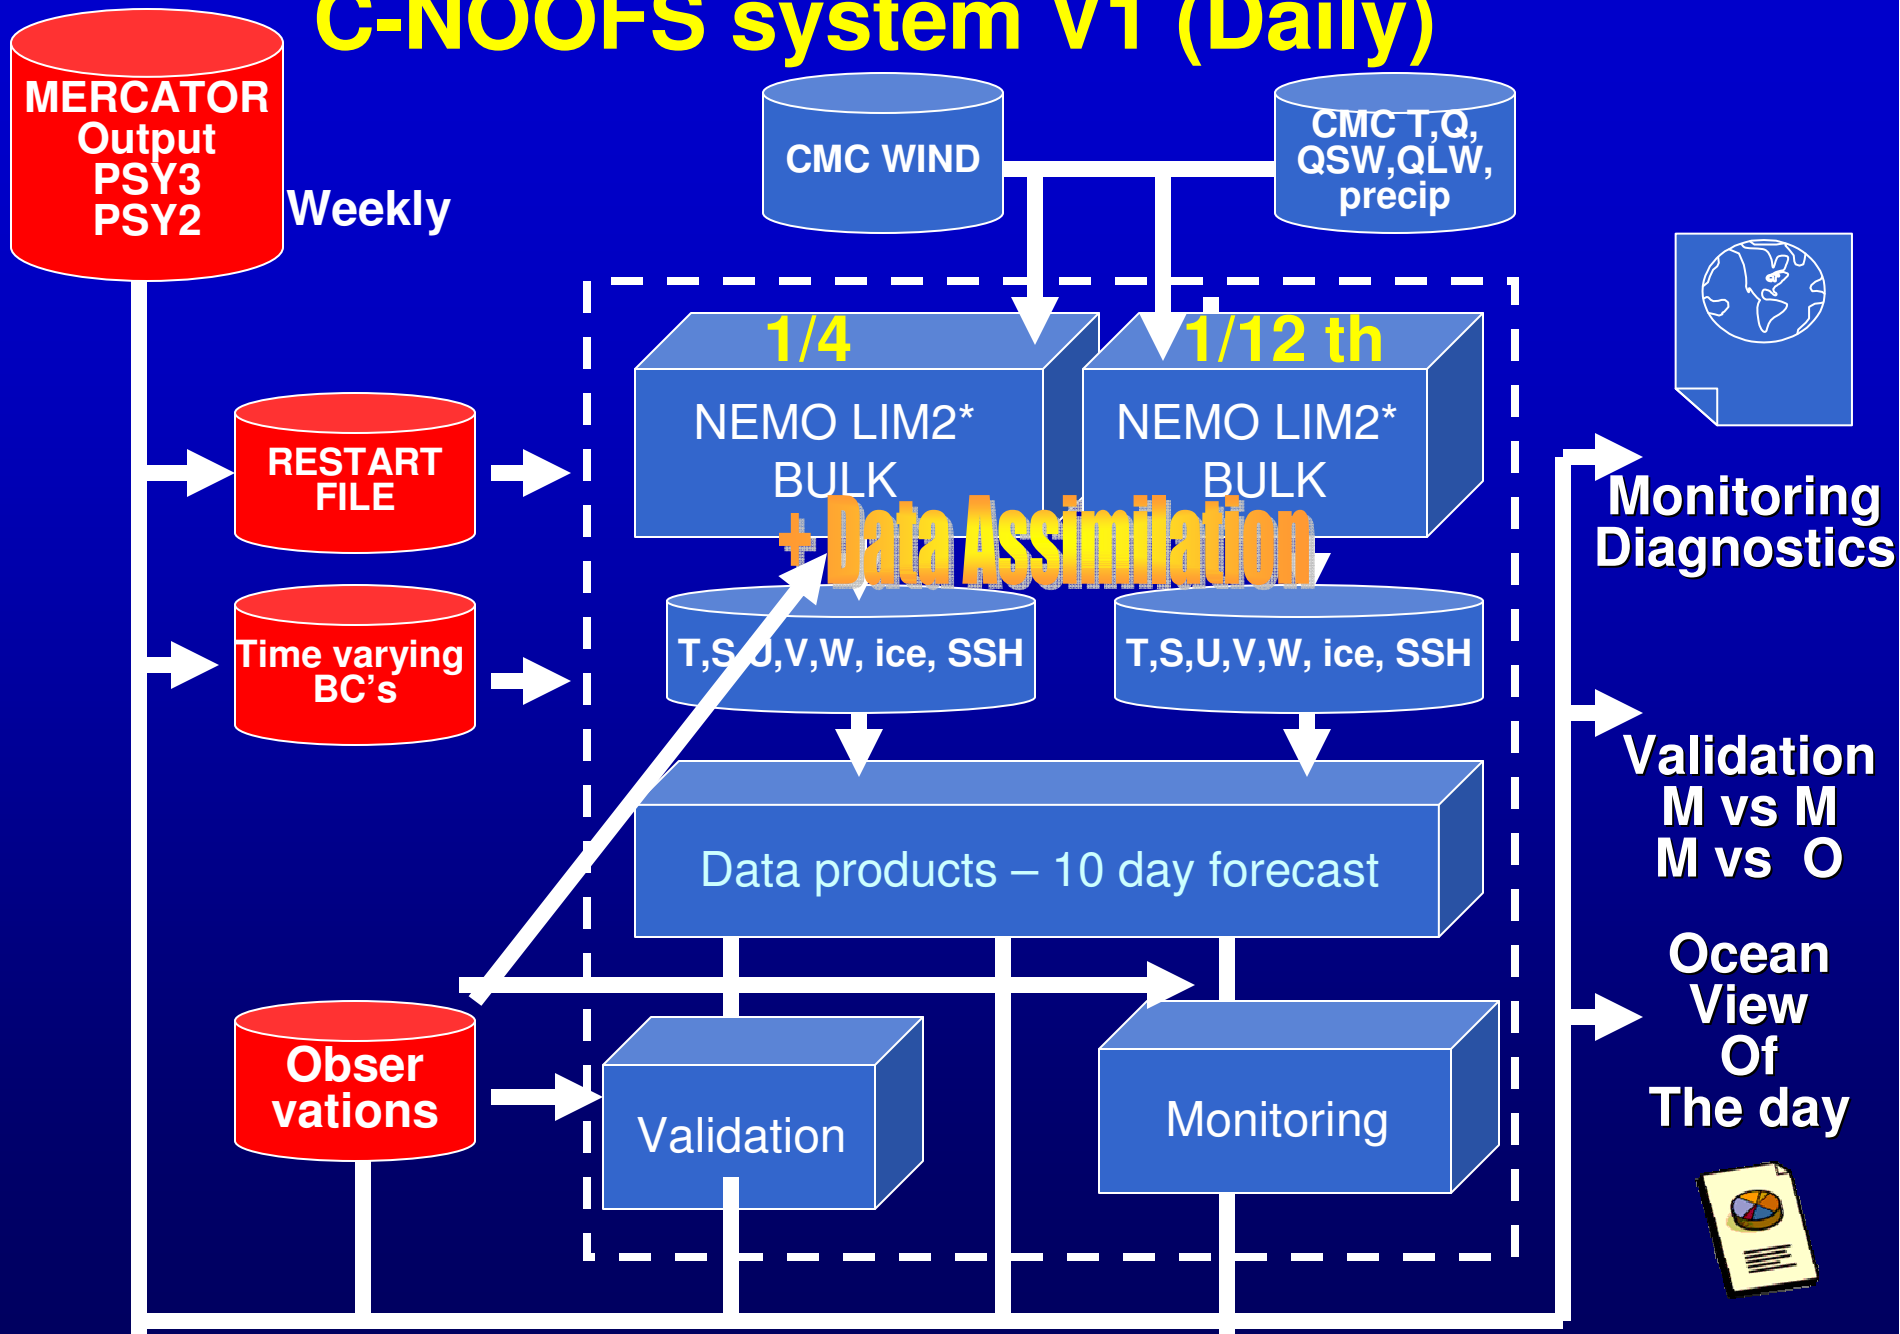

Pre-requisite for coupled atmosphere ocean ice forecast system @ Environment Canada

Analysis

C-NOOFS system V1 (Daily)

Validation Package

Quantitative methodology to assess ocean model performance

Inter-comparison with observations and other models

For hindcasting and forecasting

Present package:

Ice Extent (fraction)

Sea Surface Height

Sea Surface Temperature

Future package:

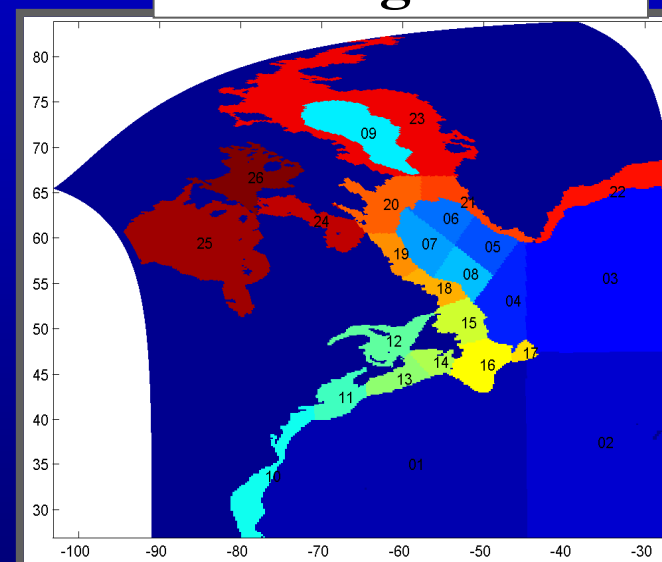

Mooring inter-comparison module

In-situ profile comparison (ARGO, CTD)

Drifter comparison module

End user validation modules

Analysis also by Region

Satellite SST Validation Model – Observed Differences Sea surface temperature

Day 10 of Forecast: October 16th 2009

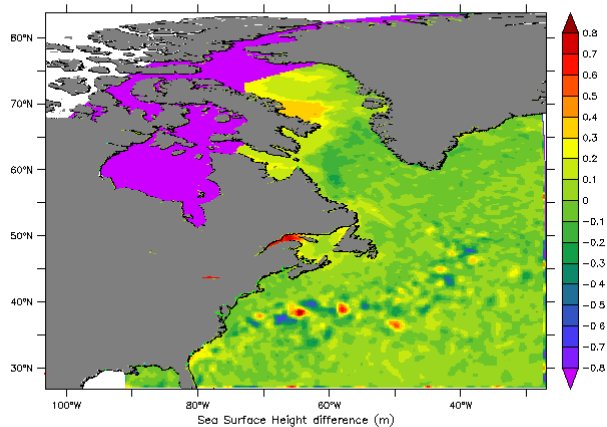

Sea Surface Height Validation with AVISO Altimetry

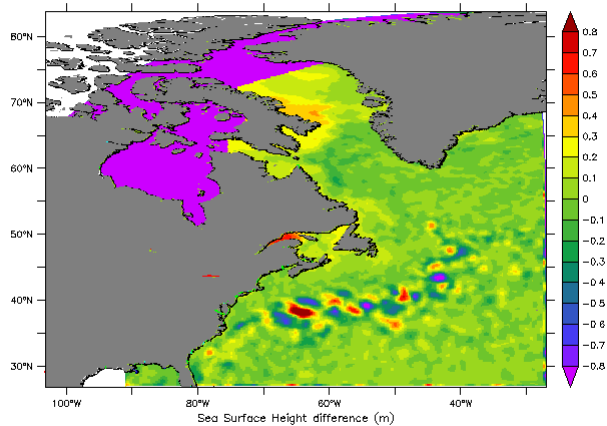

1 day error

NWA025.v1 compared to AVISO Forecast 20090513 (day 1)

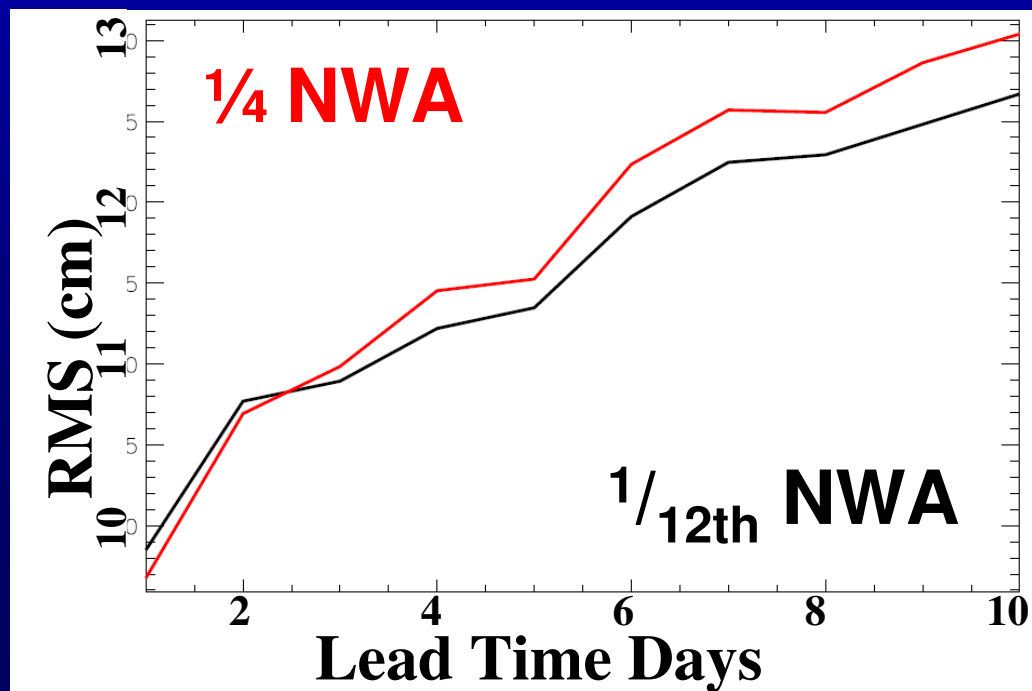

10 day error

NWA025.v1 compared to AVISO Forecast 20090522 (day 10)

- C-NOOFS NWA025 – AVISO after
 - 1 day and
 - 10 days of forecast

MODEL Sea Surface Height Error Growth

Planned End Use Validations

■ Drifters:

- Field Experiment September 2010:
 - 20 Drifters deployed at 1m and 15m
- Create database of drifter data from Canadian Coast Guard database
- Important to demonstrate usefulness/limitations of models for Search and Rescue

■ Iceberg drift:

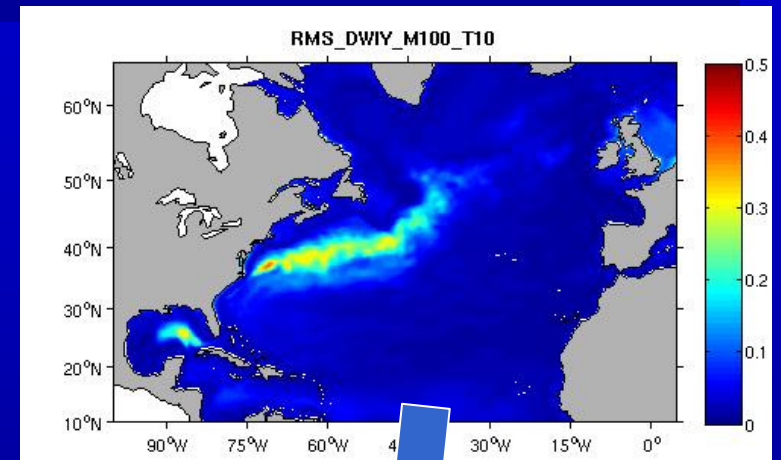

- Create daily iceberg drift prediction for 10 days along observed iceberg trajectory
- Develop statistics of drift prediction skill:
 - Separation distance at 1, 2 ... 10 days of forecast.
 - Statistics over long periods of drift for a particular tracked iceberg:
 - Provides confidence in how well the model produces drift
 - Permits end users to make decisions on model accuracy

DFO Uses of GOAPP Enhanced Ocean Information: Historical Reconstructions

- Important for DFO's new ecosystem approach.
- Useful for interpreting historical fish/larvae/zoo plankton population observations
 - i.e. spawning times
- Useful for evaluating and adjusting DFO observations programs:
 - Multi-species surveys
 - AZMP program

Requirements:

- Accessible data sets and info
 - Can be used by biologists to collaborate with oceanographers
- Accessible demonstration of value historical reconstructions

**GOAPP: Example
Improvement of using new
Climatology
(Wright)**

DFO Uses of GOAPP Enhanced Ocean Information: Historical Reconstructions

Common DFO-GOAPP WEB objectives:

- Solidify web presence and accessibility
 - WMS server GODIVA system
 - OCEAN DIVA Server
 - Thredds data server
 - Validation system in
- Development of on line validation system
 - Ice distribution
 - Satellite validation
 - In-situ validation
 - Recreating observed indexes.
- Historical Reconstructions:
 - 2002–2009
- Forecast Runs

Department of Fisheries and Oceans

- Regionalised government department
- Strong will for oceanographers to work nationally together
- Dearth of Data Assimilation Expertise
- CONCEPTS, COMDA and GOAPP collaborations are essential:
 - Provide national cohesison

Concluding Comments

Long Term Vision

- **DFO needs to know the state of the ocean; past present and future to better deliver it's mandate.**
- **EC requires to deliver best possible weather forecast: short term, medium term long term.**
- **Coupled Atmosphere Ocean, Atmosphere, Ice forecast systems with:**
 - **assimilation in all 3 components will provide the ultimate environment description tool for all.**
- **University research fosters much needed expertise and knowledge as demonstrated through GOAPP.**
- **Challenge:**
 - **Working together to build a Canadian Capacity in Environmental Prediction**
 - **Information/plans need to be shared**
